

MULTI-STEP AI PROMPT CHAINING ASSIGNMENT

Scenario: Customer Feedback to a Restaurant Service Improvement Plan

Goal

The goal of this workflow is to analyze raw customer feedback about a casual restaurant, identify the main service problems and customer expectations, and transform those findings into a practical service improvement plan.

The workflow consists of three chained stages:

- Step 1 – Extraction and Planning: Analyze raw customer feedback and organize the major complaints, positive points, customer needs and service gaps.
- Step 2 – Generation and Drafting: Use the Step 1 analysis to prioritize the most important problems and create a targeted service improvement plan.
- Step 3 – Evaluation and Refinement: Critically review the improvement plan against specific criteria and produce a polished final version.

Each step uses the output of the previous step, creating a continuous chained workflow.

STEP 1: EXTRACTION AND PLANNING

Objective

Analyze messy customer feedback and identify recurring complaints, positive experiences, customer expectations and possible service gaps. Organize the findings into a structured summary that can be used in the next step.

Prompt 1 – Customer Feedback Extraction

Act as an expert customer experience analyst.

I am going to provide you with messy and unorganized customer feedback about a casual restaurant called FreshBite Café.

Your task is to:

1. Identify the main customer groups mentioned in the feedback.
2. Extract the major complaints and positive points.
3. Identify the main customer needs and expectations.
4. Identify service strengths and weaknesses based only on the feedback.
5. Identify clear service gaps or unmet customer needs.
6. Create a structured customer feedback summary that can be used to develop a service improvement plan in the next step.

Do not invent customer experiences or restaurant services that are not present in the feedback. Clearly separate observations from conclusions.

Raw Customer Feedback:

- FreshBite Café is a casual restaurant that serves students, office workers and families.

- Several students said the food is affordable and tastes good, but they sometimes wait too long during lunch hours.
- Some office workers liked the friendly staff and clean seating area, but said that orders are occasionally delayed when the restaurant is busy.
- A few families appreciated the menu variety, but mentioned that finding available tables during peak evening hours can be difficult.
- Customers said they would like faster service during busy periods.
- Some customers want clearer information about their order status when there is a delay.
- Customers generally like the food quality, reasonable pricing and friendly staff.
- The restaurant should improve peak-hour service without reducing the quality of food or customer interaction.

AI RESPONSE – STEP 1

Structured Customer Feedback Summary

1. Main Customer Groups

- Students looking for affordable food and faster lunch service.
- Office workers who value friendly service and timely orders.
- Families who value menu variety and available seating.

2. Customer Feedback Analysis

Area	Positive Point	Complaint / Limitation
Food	Affordable and good taste	No major food-quality complaint
Staff	Friendly customer interaction	Service can slow down when busy
Seating	Clean seating area	Tables can be difficult to find at peak evening hours
Ordering	Customers can place normal orders	Orders may be delayed during busy periods
Communication	Customers generally have a positive experience	Some customers want clearer order-status information

3. Main Customer Needs

- Faster service during lunch and other peak periods.
- Clearer information when an order is delayed.
- Better availability of seating during busy evening hours.
- Maintaining affordable, good-quality food.
- Maintaining friendly customer service.

4. Service Strengths

- Affordable food.
- Good food taste.
- Friendly staff.
- Clean seating area.
- Menu variety for different customer groups.

5. Service Gaps

- Longer waiting times during peak hours.
- Delayed orders when the restaurant is busy.
- Limited table availability during peak evening periods.
- Insufficient order-status communication during delays.

6. Initial Opportunity

The main opportunity is to improve peak-hour service speed and communication while preserving the restaurant's existing strengths of affordable food, good taste, friendly staff and a clean environment.

STEP 2: GENERATION AND DRAFTING

Objective

Use the structured customer feedback summary generated in Step 1 to identify the strongest service problem and create a targeted service improvement plan for FreshBite Café.

Prompt 2 – Service Improvement Plan Generation

Excellent. Now use only the structured customer feedback summary you just created to develop a targeted service improvement plan for FreshBite Café.

Your task is to:

7. Select the most important unmet customer need.
8. Identify the strongest service gap that FreshBite Café should address first.
9. Explain how the restaurant can address that gap using only information supported by the feedback summary.
10. Create a clear three-part service improvement plan.
11. Create a short customer-facing message describing the improvement.

Follow these constraints:

- Base the plan only on the customer feedback summary.
- Do not claim new technologies, services or facilities that were not mentioned in the original feedback.
- Keep the recommendations practical and specific.
- Use simple and professional language.
- Focus on improving the customer experience while preserving existing strengths.

AI RESPONSE – STEP 2

Targeted Service Gap

The strongest unmet need is faster and more predictable service during peak hours, especially for students and office workers.

Strongest Service Problem

The main service gap is that orders can be delayed when the restaurant is busy, and customers may not receive clear information about the delay.

How FreshBite Café Can Address the Gap

FreshBite Café can focus on improving peak-hour order handling and customer communication while maintaining its existing food quality and friendly service.

Three-Part Service Improvement Plan

Priority	Action	Expected Benefit
1. Peak-hour service	Focus staff attention on faster order handling during busy lunch and evening periods.	Reduced customer waiting time
2. Order communication	Give customers clearer information when	Less uncertainty and frustration

	an order is delayed.	
3. Peak-hour seating	Pay closer attention to table availability during busy evening periods.	Better seating experience for families and other customers

Customer-Facing Message

FreshBite Café is focusing on faster peak-hour service and clearer order communication while continuing to provide affordable food, good taste and friendly service.

STEP 3: CRITIQUE AND REFINEMENT

Objective

Evaluate the service improvement plan created in Step 2 against a specific checklist and refine it into a final version.

Prompt 3 – Critique and Refinement

Before we finalize the FreshBite Café service improvement plan, act as a strict senior customer experience manager.

Review the service improvement plan and customer-facing message you just created against this checklist:

12. Does the plan clearly address the main customer groups identified in the feedback?
13. Does it directly address the strongest unmet need from the customer research?
14. Does it focus on the strongest service gap rather than unrelated issues?
15. Does it use only information supported by the original feedback?
16. Are the recommendations practical and specific?
17. Does the plan preserve the restaurant's existing strengths?
18. Is the customer-facing message concise and clear?
19. Are there any unsupported claims or unnecessary statements?

First, provide a concise critique and identify any weaknesses.

Second, produce the final corrected service improvement plan and customer-facing message.

Do not merely describe the corrections. Apply them to the final version.

AI RESPONSE – STEP 3

Senior Customer Experience Manager Critique

- The target customer groups are reflected through the focus on students, office workers and families.
- The plan addresses the main unmet need: faster service during peak periods.
- The plan also addresses the related communication problem when orders are delayed.
- The recommendations remain within the information supported by the original feedback.
- The three priorities are practical and connected directly to the identified service gaps.
- The plan preserves important strengths such as food quality, reasonable pricing and friendly staff.
- The customer-facing message is concise, but it can be made more direct and less general.
- The final version should clearly prioritize faster peak-hour service, clearer delay communication and better attention to peak-hour seating.

FINAL CORRECTED SERVICE IMPROVEMENT PLAN

Priority 1: Improve Peak-Hour Service

FreshBite Café should prioritize faster order handling during busy lunch and evening periods to reduce customer waiting time.

Priority 2: Improve Order Communication

When an order is delayed, customers should receive clearer information about the delay so they are not left uncertain.

Priority 3: Improve Peak-Hour Seating Management

The restaurant should pay closer attention to table availability during busy evening periods, especially when families are looking for seating.

Final Customer-Facing Message

FreshBite Café is improving peak-hour service with faster order handling, clearer delay communication and better attention to seating—while keeping the affordable food, good taste and friendly service customers value.

WORKFLOW SUMMARY

Step	Input	Output
Step 1 – Extraction/Planning	Raw customer feedback	Structured customer needs, strengths, weaknesses and service-gap analysis
Step 2 – Generation/Drafting	Step 1 customer feedback summary	Targeted service gap, improvement plan and customer-facing message
Step 3 – Evaluation/Refinement	Step 2 improvement plan	Critique + final corrected service improvement plan

Chaining Dependency

Step 2 explicitly uses the structured customer feedback summary generated in Step 1 to identify the strongest service gap and create a targeted improvement plan. Step 3 explicitly reviews the improvement plan generated in Step 2 against a defined checklist and refines it. Therefore, the workflow demonstrates a genuine multi-step chained prompting process rather than three independent prompts.

CONCLUSION

This workflow demonstrates how chained AI prompts can transform raw customer feedback into a practical service improvement plan.

The first prompt extracts customer groups, complaints, strengths and needs, the second prompt transforms those findings into a targeted improvement plan, and the third prompt evaluates the result against defined criteria and produces a refined final version.

The workflow demonstrates the required progression: Extraction/Planning → Generation/Drafting → Evaluation/Refinement.

SUBMISSION EVIDENCE TO ADD

Before submitting, run the three prompts in the assigned AI interface in the same chat session and add screenshots or the direct chat link showing the live conversation. The screenshots should clearly show Prompt 1 and its response, Prompt 2 and its response, and Prompt 3 and its response.
